

DominionC2 – Threat Emulation Framework

Seed Round: 1,200,000 € - TRL 4+ (Android) - Building iOS & Cross-Platform

Problem

Tactical Android and iOS devices (ATAK, COMSEC, battlefield apps) are increasingly targeted by advanced adversaries. There is no complete, resilient, dual-platform C2 threat emulation tool for authorised red team operations, military cyber ranges, or corporate BYOD audits.

Solution – DominionC2

DominionC2 is a dual-use, multi-agent C2 framework that emulates real-world threats. The existing Android agent (7,145 LOC) already provides:

- GPS, contacts, SMS, call logs, clipboard
- Screen/audio/video recording
- Shell execution, file upload
- One-click export to CSV, PDF, XLSX
- Resilient file transfer (RFC 7230 compliant)

With this seed round we will:

- Build an iOS agent (feature parity with Android)
- Unify both platforms into one C2 dashboard
- Develop offline mode, geofencing, live map, root capabilities
- Prepare for cyber range validation (TRL 6)

Key Differentiators

- Resilient transfer – Three-step stabilisation + exponential backoff
- Multi-agent by design – Dynamic device list, auto-refresh, sessionStorage
- Legal & transparent – Physical install, user prompts – not spyware
- Modular architecture – Easy to extend (iOS, new commands)
- Instant reporting – CSV, PDF, XLSX

Target Markets & Dual-Use Applications

- Military / NATO – Cyber range training, COMSEC auditing, ATAK testing
- Commercial – Insider threat detection, BYOD pentesting (banking, energy)
- Red Teams – Authorised Android & iOS assessments

Current Status (TRL 4)

- Fully functional Android prototype
- 7,145 LOC, 18+ features
- Tested on AVDs and physical devices
- Next: iOS agent + cyber range validation

Team (to be hired with this sound)

- Cyber Security Developers (Android + FullStack, iOS + FullStack) - 5x per tech
- Team Managers (Android / iOS) - 2x
- Security QA Engineers – 2x
- Legal / IP counsel (part-time) - 1x
- Marketing / Sales – 1x
- Founder (CEO / Lead Researcher) - Dawid Wordliczek – OSCP, CRYPTO/CRTM (in progress), full-stack (Python/Flask) & Android (Kotlin). Built the platform from scratch

Funding Request – Seed Round

Amount: 1,200,000 € (equity negotiable)

Use of funds (18 months):

- Salaries & team expansion – 70% (~840k €)
- R&D (iOS, stealth, offline mode) – 15% (~180k €)
- Legal, IP, company formation – 5% (~60k €)
- Marketing & business development – 10% (~120k €)

Business Model (Tiered Licensing)

Version	Perpetual License	Subscription (year)
Android only	50,000 €	15,000 €
IOS only	80,000 €	25,000 €
Android + iOS (bundle)	100,000 €	30,000 €

Target customers: military, NATO, pentesting firms, large enterprises.
